

# PosPay Prevent Check Fraud While Saving Money

## Integrates With Your Financial Institution

*"We worked for months with our bank to create Positive Pay files on our own. The PosPay program is very user friendly and saves us man-hours every time we produce checks."*

## Electronic Check Fraud Monitoring Directly Integrated with Financial Edge

PosPay is a simple solution with a big impact. It is the only Positive Pay (PosPay) solution fully integrated with Financial Edge (and FE NXT) to protect organizations against check fraud. There is no need to set up export files, run complicated queries, or manually edit your data. Save time, resources, and avoid human error by outputting PosPay files in the exact format your bank requires. PosPay works with manual, computer, and payroll checks recorded in FE. Unlike a query or export, PosPay can also scan previous check runs to see if any previously processed checks have subsequently been voided and include that updated check status with the current check run.

PosPay has always been a reliable asset within the classic view of Financial Edge (FE), but as the Sky API grows, users are shifting more of their work to the web view offered in FE NXT. Working together with Blackbaud, we're excited to provide a more convenient way to create PosPay files within FE NXT.

### PosPay Enables You To:

- ✓ Create data files in the format required by your financial institution
- ✓ Eliminate complicated processes. No need to run complex queries or manually massage data
- ✓ Confirm the last check number and automatically start with the next check sequence
- ✓ Scan earlier check runs to see if previously processed checks have been voided
- ✓ Work universally with manual, computer, and payroll checks

### Your Organization Can:

- ✓ Decrease the risk of check fraud
- ✓ Save time, resources, and human error
